

Overview of Athabasca Oil Corporation

Athabasca Oil Corporation (“AOC”) is a unique liquids-weighted intermediate producer. At AOC, we proudly and responsibly produce Canadian energy to improve people’s lives. We are passionate, take ownership of our work, get things done and are great at what we do.

The company has a core thermal oil business currently producing 32,000 bbl/d with a significant growth program underway. Athabasca has >1 billion barrels of top quartile reserves and a deep inventory of future projects. In addition, in December 2023 Athabasca announced the creation of Duvernay Energy Corporation, a private subsidiary company. Duvernay Energy is a unique standalone self-funded entity that offers investors pure-play exposure to the Kaybob Duvernay and is expected to grow to 25,000 bbl/d by the late 2020’s. Strategically Athabasca has two companies with independent strategies and capital allocation frameworks.

AOC has positioned itself with strong financial capacity of ~\$450 million (mostly cash), putting it in an enviable position relative to its peers. The company is resilient to commodity price volatility and is expecting to generate over \$1 Billion of free cash flow over the next three years. All free cash flow is currently returned to shareholders in the form of share buybacks. The combination of production growth and reduced share count is resulting in industry leading cash flow per share growth. The corporate strategy is to continue to grow our assets, generate significant free cash and provide superior returns to shareholders over the long term. Sustainability is core to the business with strong governance and a commitment to reducing emissions through its technology roadmap.

Athabasca has a track record of transformative projects including JV’s, M&A, royalties, and unique marketing arrangements. AOC offers a dynamic and exciting work environment for the right candidate. AOC is publicly traded on the TSX under the symbol “ATH”.

AOC Chief inspector / Pipeline Integrity Coordinator

We are currently recruiting for a Chief Inspector reporting directly to the Director of Engineering. This position will be based in Calgary but will require significant visits to site. The primary focus will be leading and maintaining AOC Pressure equipment management System (PEIMS) and pipeline assets and contribute to the tank integrity management strategies used within the company.

Responsibilities:

- Oversee the pressure equipment and pipeline integrity management database, ensuring compliance with jurisdictional requirements
- Responsible for updating, training, and ensuring compliance of Athabasca’s Pressure Equipment Integrity Management System (PEIMS), Pipeline Operating and Maintenance Manual (POMM), and the Safety Loss Management System (SLMS) requirements
- Identify and work to resolve Non-Conformances NCRs
- Develop, maintain, and review internal manuals, specifications, process, integrity forms procedures for both pressure equipment and pipelines
- Act as liaison with Regulatory jurisdiction, authorized inspectors, NDE providers, and contractors
- Review and approve Over Pressure Protection By System Design (OPPSD) submissions
- Support the management of change (MOC) process as it applies to pressure equipment, tanks, and pipelines
- Lead and participate in incident investigations and ensure corrective actions are tracked and completed

- Collaborate with Director of Engineering to set yearly goals, objectives, and plans to maintain facility integrity

Qualifications:

- 15+ years of experience in Integrity management of pressure equipment, pipelines and tanks in the Oil & Gas industry
- Technical diploma in mechanical, metallurgical, chemical, or welding or hold a minimum of a valid 2nd class power engineering certifications with a minimum 15 yrs operating experience.
- Hold a valid In-Service Pressure Equipment Inspector Certificate of Competency for Alberta with boiler inspection experience.
- Hold the following API certifications, API 653, 570, and 510
- Hold NACE (AMPP) basic corrosion certification and have a clear understanding of corrosion degradation mechanisms
- Hold a National Board certification for boiler inspection
- Working knowledge of applicable jurisdictional regulations, codes, and standards (ASME, API, ABSA, AER, CSA, etc)
- Proven leadership, communication, organization, analytical, interpersonal skills, and the ability to work effectively in a team environment
- Ability to manage multiple tasks and prioritize in a fast -paced environment with minimal supervision
- Strong ability to influence and collaborate across organizational boundaries
